

Green Earthology, Inc  
436 Bonita Rd, #412 Bonita,  
CA 91902

Attention: Mark Farmer & Kevin Fretz

Gentlemen,

As you know, in January 2018, the Golden Rain Foundation, Managing Agent, for Rossmoor in Walnut Creek contracted with Green Earthology, Inc to conduct a waste audit and organic sustainability study.

I would like to congratulate you and the entire Green Earthology team for doing such a tremendous job for our community. The study was completed in June of 2018 and, due to your professional efforts, our community received a substantial rebate check from our contract waste haulage company and a better overall trash program for our future. In addition to this, we are excited to begin moving forward with our new closed loop organics program. This program will allow us to divert our communities' green waste from being landfilled, into a certified organics recovery program.

Your study confirmed that the organic products developed and installed by the Green Earthology team, demonstrated a real potential to provide our community with a reduction in irrigation requirements. We recognize that cutting irrigation requirements can lead us to a substantial budget surplus.

Based upon field studies, we remain optimistic that with our transition to become organic these reductions are obtainable. I am very pleased with the results thus far and would highly recommend your services and overall program to others. We look forward to working with Green Earthology, Inc in the immediate future to move forward with our transition plan.

Most Sincerely,

  
Paul Donner  
Director of Mutual Operations  
Golden Rain Foundation
